

AUTOCLAVES FOR CANNED

JP Selecta autoclaves are perfect for carrying out sterilization and pasteurization processes of any type of packaged food product and thus obtaining preserves and semi-preserved with total quality assurance.

It is perfect for small and medium producers as well as R & D departments. Integral control software for thermal treatments, and calculation of F_0 and P_0 values.

By means of a **temperature probe** in one of the containers, sterilization and pasteurization process can be controlled with full warranty.

Thanks to the **touch screen**, the parameters of temperature, time and pressure can be programmed and adjusted before and during the treatment to obtain the desired sterilization (Fo) or pasteurization (Po) value and thus a product with full sanitary guarantee.

- ✔ -**Fast cooling**, a rapid decrease in temperature helps the food to retain its organoleptic properties.
- ✔ -**Easy handling**, the autoclave does not require a skilled person in its use.
- ✔ -**TFT touch screen**, simple and intuitive, makes it easy for the user to use.
- ✔ -**Safety**, safety thermostat, correctly closed door detection, overpressure protection, safety pressure switch and thermal protection enclosure.
- ✔ -**Loading and unloading crane**, basket elevator that simplifies the loading and unloading of containers in the autoclave.
- ✔ -**Baskets**, large variety of sizes according to the user's containers capacity.

RANGE OF MODELS

80 y 150 Litres

20 Litres

• Autoclaves 20 litres, ideal for testing in R&D laboratories or pilot lots.
